Testing two AI models in your language

Thank you for helping. You will try two versions of an AI model on your own laptop, **Model A** and **Model B**, and tell us which one works better in Yoruba, Hausa or Igbo. You will not be told which is which. That is on purpose, so your judgement stays fair. It takes about **45 minutes**, and nothing is sent anywhere: both models run offline on your laptop.

What you need

- A Mac (Apple M1 or newer) or a Windows laptop, with **at least 8 GB of memory**. More is better.
- **About 12 GB of free disk space.**
- Wi-Fi for the downloads (about 10 GB in total). After that, no internet is needed.

1. Install LM Studio (5 minutes)

1. Go to **lmstudio.ai**, download LM Studio for your computer and install it.
2. Open it once, then close it.

2. Download and add the two models (20–40 minutes, mostly waiting)

1. Download **model-A.gguf** and **model-B.gguf** from the link you were sent. Save both in your Downloads folder.
2. Open **Terminal** (Mac) or **PowerShell** (Windows).
3. Paste these three lines, pressing Enter after each.

Mac:

```
cd ~/Downloads
~/.lmstudio/bin/lms import -y -c --user-repo tester/model-A model-A.gguf
~/.lmstudio/bin/lms import -y -c --user-repo tester/model-B model-B.gguf
```

Windows:

```
cd $env:USERPROFILE\Downloads
& "$env:USERPROFILE\.lmstudio\bin\lms.exe" import -y -c --user-repo tester/model-A model-A.gguf
& "$env:USERPROFILE\.lmstudio\bin\lms.exe" import -y -c --user-repo tester/model-B model-B.gguf
```

4. Open LM Studio. Both models now appear under **My Models**.
5. If you are short of disk space, delete the two files from Downloads; LM Studio has kept its own copies.

3. Run the tasks (15 minutes)

1. In LM Studio, open **Chat**.
2. At the top, choose **model-A** and wait for it to load.
3. Start a **new chat** for each task in the task sheet, and paste the task exactly as written.
4. Write down how the answer reads, and roughly how long it took to finish.
5. Switch to **model-B** at the top and do the same five tasks again.

Please use **the same language** for all five tasks. Choose the one you speak best.

4. Tell us what you found (5 minutes)

Fill in the feedback form from the link you were sent. There are no right answers. "They are the same" is a useful answer too.

If anything goes wrong, send a screenshot to the person who invited you.

The five tasks

Replace **[language]** with Yoruba, Hausa or Igbo, whichever you chose. Use the same language for every task, on both models. Start a new chat for each task.

1. Translate

> Translate into [language]: "Wash your hands with soap before you eat and after you use the toilet. Boil drinking water or treat it before use. If a child has diarrhoea for more than two days, take the child to the clinic."

2. Write a message

> Write a short WhatsApp message in [language] inviting my neighbour to my daughter's naming ceremony on Saturday at 10 a.m.

3. Explain

> In [language], explain in three or four sentences why children should sleep under a mosquito net.

4. Advise

> Answer in [language]: what should a small farmer do to prepare before the rainy season starts?

5. Summarise

> Summarise this in [language] in two sentences: "The community borehole was repaired last week after three months out of service. Women and children no longer walk two hours to the river for water. The water committee will now collect a small monthly fee from each household to pay for future repairs, and a mechanic from the next town has agreed to train two young people from the community."
